

ABHAY SINGH CHAUHAN

Full-Stack Developer

abhaysinghchauhan2506@gmail.com | +91-8003572506 | LinkedIn | GitHub

EDUCATION

Vellore Institute of Technology

B.Tech in Computer Science & Engineering

CGPA: 8.23

Bhopal, India

Expected 2027

Army Public School

Class XII (CBSE)

Percentage: 96% | Award: Academic Excellence Award

Ambala Cantt, India

2022 – 2023

SKILLS

- **Languages:** C++, Java, Python, JavaScript, TypeScript, SQL, HTML/CSS
- **Frameworks & Libraries:** React, Next.js, FastAPI, Tailwind CSS, Scikit-learn, Pandas, NumPy
- **Databases & Backend:** PostgreSQL, Supabase, Convex, Firebase
- **Tools & Integrations:** Stripe, Clerk, Git, GitHub, Vite, Postman
- **Core Concepts:** Data Structures & Algorithms (DSA), System Design, RESTful APIs, Real-time Data Sync

EXPERIENCE

Mergeflo

Full-Stack Developer Intern

Remote

Jan 2026 – Mar 2026

- Architected and deployed the commercial landing page utilizing modern frontend frameworks, achieving a **98+ Google Lighthouse performance score** and optimizing the digital footprint for user acquisition.
- Integrated Clerk for robust, token-based user authentication and implemented Stripe payment gateways, establishing a secure monetization pipeline capable of processing transactions with **99.9% uptime**.
- Developed a reactive backend architecture utilizing Convex, managing real-time global state and database synchronization that reduced client-side data reflection latency to **sub-10 milliseconds**.

Playops

Software Engineering Intern

Remote

Nov 2026 – Jan 2026

- Spearheaded the migration of the core backend architecture from Supabase to an industry-standard PostgreSQL database, reducing average query latency by **40%** and establishing a schema capable of handling **10,000+ concurrent connections**.
- Engineered a highly concurrent RESTful API layer utilizing FastAPI under the direct guidance of a senior engineering mentor, optimizing endpoint response times from **~300ms** to **under 50ms**.
- Refactored legacy database schemas with strategic indexing and relational constraints, reducing data redundancy by **25%** and significantly accelerating complex JOIN operations.

iCreate Club, VIT Bhopal

Co-Founder

Bhopal, India

Dec 2024 – Present

- Built an automation-driven Token Management System using Python and Excel for real-time queue tracking, successfully managing workflows for over **500+ participants** with **zero downtime**.
- Designed a secure web interface for encrypted user token generation, facilitating seamless and secure transactions during high-traffic technical fests.

PROJECTS

MiroFish Lite | Python, Streamlit, Ollama, Qwen2.5, Local LLMs

- Architected a privacy-first, multi-agent decision simulation engine utilizing Python and Streamlit, enabling offline execution of **7B parameter models** via Ollama with zero API dependencies.
- Optimized local compute resource management by engineering a sequential execution pipeline, sustaining a flat memory footprint of **6–8 GB** on Apple Silicon hardware to ensure system stability.
- Developed a structured **3-round agentic debate protocol** with customizable JSON-based personas, automatically synthesizing complex prompt arguments into actionable, data-driven verdict reports.

The PlayOps Recruiter | *Python, Aiogram, Gemini 2.5 Flash API, SQLite*

- Developed an asynchronous Telegram application utilizing Python and Aiogram to simulate technical software engineering interviews, efficiently managing state and session data for concurrent users via SQLite.
- Integrated the Gemini 2.5 Flash API to dynamically generate and evaluate algorithmic challenges, providing real-time assessments based on code correctness, Time Complexity ($O(n)$), and Space Complexity.
- Engineered an interactive progression tier system with inline UI components, tracking candidate performance metrics and dynamically adjusting problem difficulty based on historical success rates.

JobFlow | *React 19, TypeScript, Tailwind CSS, Vite*

- Developed a high-performance Single Page Application (SPA) utilizing React 19 and Vite, achieving optimized rendering and a **40% reduction** in initial load times compared to previous iterations.
- Implemented robust state management via Context API and LocalStorage, ensuring secure, offline-ready data persistence with seamless re-sync capabilities upon network reconnection.

CERTIFICATIONS & LEADERSHIP

- **Certifications:** Introduction to Machine Learning (NPTEL), Google Analytics, Programming in Java (VITYarthi), Python Essentials (VITYarthi).
- **Leadership:** Leadership Council Member (E-Cell VIT Bhopal), Project Supervisor (Annual Project Exhibition 2024).
